Correction to: Eur J Nutr (2016) 55:7–20
https://doi.org/10.1007/s00394-014-0818-5

In the original version of this article, a small typing error has been identified in the Abstract and Results sections wherein the number of cases for a sub-group analysis was incorrectly indicated as n = 101 while the correct number is in fact 151.

In the abstract, third sentence of the result sections which previously read

In sub-group analyses available for 91% of the cohort artificially sweetened soft drinks increased HCC risk by 6% per 1 serving increment (HR 1.06, 95% CI 1.03–1.09, *n*cases = 101); for sugar-sweetened soft drinks, this association was null (HR 1.00, 95% CI 0.95–1.06; *n*cases = 127, *p*heterogeneity = 0.07).

should have read

In sub-group analyses available for 91% of the cohort artificially sweetened soft drinks increased HCC risk by 6% per 1 serving increment (HR 1.06, 95% CI 1.03–1.09, *n*cases = 151); for sugar-sweetened soft drinks, this association was null (HR 1.00, 95% CI 0.95–1.06; *n*cases = 127, *p*heterogeneity = 0.07).

In the result sections, under the sub section ''Soft drink intake and the risk of HCC'', first sentence which previously read

In additional analyses by the type of drinks (sugar-sweetened vs. artificially sweetened), each additional serving of artificially sweetened soft drink was positively associated with HCC risk (HR 1.06, 95% CI 1.03–1.09, *n*cases = 101), while for sugar-sweetened soft drinks, this association was null (HR 1.00, 95% CI 0.95–1.06, *n*cases = 127).

should have read

In additional analyses by the type of drinks (sugar-sweetened vs. artificially sweetened), each additional serving of artificially-sweetened soft drink was positively associated with HCC risk (HR = 1.06, 95% CI: 1.03–1.09, *n*cases = 151), while for sugar-sweetened soft drinks, this association was null (HR 1.00, 95% CI 0.95–1.06, *n*cases = 127).
